

STEVEN P. KURTZ (Ph.D. Sociology, Florida International University, 1999) is Professor and Director of ARSH, the Center for Applied Research on Substance Use and Health Disparities at Nova Southeastern University. He is currently the Principal Investigator of two NIDA-funded randomized clinical trials to test the efficacy of novel substance use and sexual risk reduction interventions designed for gay and bisexual men and for young adult polydrug users in the club scene. He is also PI of a NIDA-funded study of prescription drug diversion among diverse populations. Dr. Kurtz has conducted research studies of substance use, sexual risk behaviors, related health and social problems, and intervention approaches among adolescents, young adults, women sex workers, men who have sex with men, and other vulnerable populations since 1995. Special areas of focus for this work have included prescription drug abuse and diversion, and the prevention of HIV infection. In addition, his publications include articles on crime, health disparities, sexual identities, and masculinities, as well as ethnographic accounts of a range of subcultures in which drug use is prevalent. Dr. Kurtz serves as an Appointed Member on the Behavioral and Social Science Approaches to Preventing HIV/AIDS Study Section (BSPH) of the National Institutes of Health. He is the alternate member representing South Florida on NIDA's Community Epidemiology Work Group. Dr. Kurtz is also a member of the Under-represented Populations Committee of the College on Problems of Drug Dependence, as well as the Education Committee of the Gay and Lesbian Medical Association.
